## Brainware's Globalbrain Enhances Attensity's Text Analytics 4

*Brainware's advanced search and classification added to Attensity Text Analytics Suite*

**DULLES, Virginia, September 25, 2006—Brainware, Inc.** announces today that the advanced search and classification capabilities of Brainware's Globalbrain™ have been incorporated into Attensity's new release of its Text Analytics suite, Attensity 4, available next month. Globalbrain brings powerful information search and classification functions to Attensity's applications, used by Global 2000 and government customers to create actionable information for better and faster decision making from text information.

"Globalbrain provides a fast and powerful way to find, categorize, and retrieve context-based information, regardless of where that information is stored or how it is structured," says Craig Norris, Attensity CEO. "Globalbrain integrates ideally with our Text Analytics suite, and plays a large role in enabling workflow-based analysis of text for business users."

Attensity is the first company in the market to provide a complete Text Analytics suite that takes the user from the text extraction process through to in-depth text analysis, all in an easy-to-use, seamless, web-based application. With Attensity 4, the market's first Text Analytics suite, Attensity provides a powerful set of text extraction technologies, including Attensity's patented Exhaustive Extraction™ technology. In addition, Attensity's Text Analytics suite offers a seamless, web-based business user application for text analysis.

Attensity customers use these and other Attensity tools for a variety of purposes: reducing warranty costs, improving customer service, enhancing insurance claims processing, identifying money laundering activities, and aiding in government intelligence and homeland security activities.

"The combination of Globalbrain and Attensity Text Analytics provides Attensity customers with unmatched power, speed, and accuracy in the retrieval and management of critical information," says Carl Mergele, Brainware CEO. "Attensity's corporate and government users will benefit from a significantly enhanced ability for Text Analytics to quickly retrieve, analyze, and manage complex data to improve organizational performance and competitiveness."

**About Brainware:** Brainware, Inc. provides Global 2000 corporations and government agencies with fast, structure-free access to critical information locked in the growing avalanche of organizational databases, emails, document archives, images, and file servers. Brainware's IDC-distiller™ products routinely speed processing of invoices, accounts payable, and customer orders by 40% to 80% "right out of the box," and the Globalbrain™ Suite (of OutlookAccess and Globalbrain Personal and Enterprise editions) provides context-based, high-speed search and retrieval of the "right" information from voluminous files and systems. Headquartered in Dulles, Virginia, Brainware maintains operations throughout North America and Europe.
