Brainware, Inc. Quadruples Worldwide Office Space

Software maker expands presence in U.S., U.K. and Europe

February 28, 2007, Ashburn, VA—Brainware, Inc., whose “intelligent” data capture and search software automates the high-speed processing of critical data from documents and other information sources, is in the process of quadrupling its offices in the U.S., United Kingdom, and Europe. The company’s growth in physical plant is necessary to accommodate rapid growth in revenue and staff over the last year.

In the U.S., Brainware has relocated its global headquarters in Northern Virginia’s Loudoun County, doubling its office space in the process. In the U.K., Brainware recently tripled its office size in High Wycombe (between London and Oxford), and also maintains offices in Nottingham. A company affiliate has also recently opened a new office in Neuchâtel, Switzerland. Collectively, these expansions represent a quadrupling of worldwide office space.

“It is gratifying to be able to expand our worldwide offices so rapidly,” says Carl Mergele, Brainware CEO. “We are riding a wave of demand for tools that help companies automate the laborious process of extracting information from avalanches of documents and other information, and needed new office space to handle our growth in staff. We look forward to continued expansion as our revenue and staff grow throughout 2007.”

Brainware’s data extraction and processing tools are used by some of the world’s leading companies to automatically capture information from scanned documents, images, and other sources, then export it for processing by corporate software platforms such as SAP, Oracle, Peoplesoft, JD Edwards, and others.

About Brainware: Brainware, Inc. provides Global 2000 corporations and government agencies with fast, structure-free access to critical information locked in the growing avalanche of organizational databases, emails, document archives, images, and file servers. The Brainware® engine drives the **IDC-distiller™** family of products to speed the processing of any document type-- invoices, customer orders, forms, etc.-- by 60% to 80% “right out of the box.” Brainware search algorithms also drive the **Globalbrain™** Suite (of OutlookAccess, Personal, and Enterprise editions), providing context-based, high-speed search and retrieval of the “right” information from voluminous files and systems. Headquartered in Ashburn, Virginia, Brainware maintains global sales and support operations through its North American and European offices. For more, see www.brainware.com.
