Brainware's new IDC-distiller 4.0 extends power of high-volume document processing solution

May 30, 2007, Ashburn, VA — Brainware, Inc., whose solutions enable high-speed capture, search, and classification of vital, unstructured corporate data, today announced the release of Version 4.0 of its popular [Intelligent Data Capture](#) (IDC) and document processing solution, IDC-distiller.™

In this major upgrade, Brainware has significantly extended IDC-distiller's capabilities through integrations with a variety of industry-leading applications used for optical character recognition (OCR), image and document processing, and project customization. Other upgrades include the ability to process multiple document types within a project, and to recognize non-Western character sets such as Greek, Cyrillic (e.g., Russian, Bulgarian, Serbian), and many others.

IDC-distiller 4.0 also includes new verification control mechanisms for enhanced document exception handling; page counter tools enabling better management reporting and more flexible pricing models; exchange connector capabilities allowing intelligent capture and processing of emails and their attachments; and many more features.

Several new integrations expand IDC-distiller's compatibility with an extensive array of industry-leading systems, furthering the ease of installation and use for which it is already renowned. IDC-distiller 4.0 now supports ABBYY's FineReader Engine 8 for best-in-class OCR; Accusoft ImageGear to process image documents; and WinWrap Basic for project customization.

"With these significant enhancements in Version 4.0 and our ongoing development of intelligent data capture technologies, we are continuing to advance IDC-distiller as the leading solution for high-speed, high-volume, and highly accurate document processing," says Carl Mergele, Brainware CEO. "Our expansion of supported platforms and functionality reflects our ongoing commitment to continuously improve the 'document agnostic' approach that has made IDC-distiller the industry leader."

Also new in IDC-distiller 4.0 are “white label” enhancements to facilitate integration by OEM partners seeking to use Brainware to power their solutions in high-volume document processing applications.

IDC-distiller 4.0 is now available. The features described herein are also available in IDC-distiller’s variants addressing Accounts Payable (A/P-distiller™) and Order-to-Cash (OTC-distiller™).

About IDC-distiller: IDC-distiller provides fast, template-free data extraction from any document type (invoices, customer orders, loan applications, claims or benefits forms, etc.) for auto-processing in all major ERP systems and DMS repositories. IDC-distiller routinely speeds document processing by 60% to 80%, automatically extracts line-item detail from large documents and tables, and sharply reduces the need for manual coding, data entry, or scripting.

Unavailable from any competitor, Brainware “intelligent” features include:

- Automatically understanding document content based on only a handful of samples.
- Classification of documents based on content, regardless of layout or format.
- Auto-learning of new extraction details based on prior exception handling.
- Proprietary “Associative Search” methodology to find *contextual* information, enabling unrivaled data matching.

By automating much more of the document processing lifecycle than any competitor, and generating much faster extraction rates, Brainware typically generates a full ROI in as little as six months.
