

BRAINWARE DISTILLER™

for MAILROOM AUTOMATION

There is cash hidden in your mailroom. All you have to do to find the orders, payments and contracts is sort through the thousands of documents that come in daily. Traditionally, mailroom automation has been dominated by hardware solutions focused on reducing the physical sorting and distribution of incoming mail. Brainware Distiller for Mailroom Automation takes that process a significant step further by automatically classifying scanned documents based on their content, extracting key fields for indexing and then moving the documents into the appropriate workflow and archive or DMS – all with little or no manual intervention. This significantly speeds up the process and improves efficiency, allowing you to free cash from your mailroom.

MAKE MONEY WITH DISTILLER

Thousands of documents enter your corporate mailroom each day, and until they are manually sorted and batched, there is no way of distinguishing a check from a sales order from an advertising solicitation. Brainware Distiller plugs into this operation to provide unmatched levels of classification accuracy, extraction rates, and data matching against additional databases, all leading to increased departmental productivity and a significantly reduced manual element. Brainware Distiller removes the most time-consuming steps relating to document preparation and scanning. Distiller also eliminates entry points for human error associated with these steps. Moreover, the cost of labour associated with manual processing is reduced as staff are freed up for more business-critical issues.

STREAMLINE WORKFLOWS

Distiller's classification technology streamlines workflow based on an accurate identification of product or work type and properly routes the mail items within your system.

INCREASE SCANNING PRODUCTIVITY

Distiller's automated document separation technology groups scanned documents based on the document content without inserting patch or separator sheets. Because Distiller integrates intelligent character recognition into the front end at the point of scan, it is able to automatically distinguish between checks, invoices, orders, and other forms of mail, and process all items according to pre-defined business rules.

Distiller's range of functionality manages the document automation process all the way from scanning through to delivery of the image to the correct person via workflow and exporting of data to the appropriate record keeping system.

Brainware Distiller™ was built from the ground up to handle unstructured content trapped in paper and electronic documents – with as little human intervention as possible.

ACCURATE DATA EXTRACTION

Distiller's data extraction levels are unmatched in the industry. Distiller routinely extracts 90% or more of the data needed to process any piece of mail. This accuracy drastically reduces the need for exception handling and error correction.

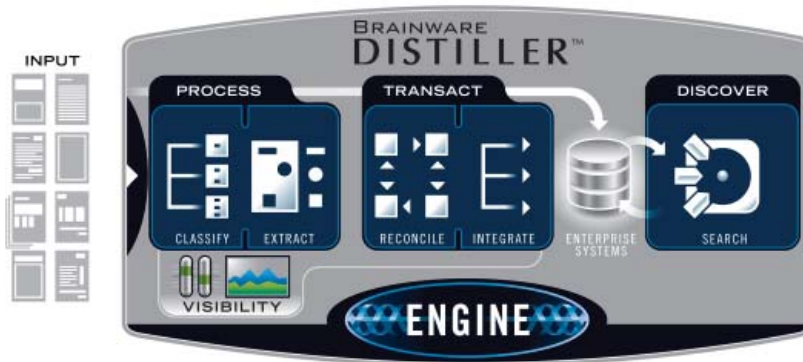

PROVIDE GREATER VISIBILITY INTO PERFORMANCE

With Distiller Visibility™ reporting capabilities, you will be able to:

- | Quickly identify all unprocessed documents imported into the system
- | Report on key performance indicators to show the efficiency of the process
- | Report at any time on which documents have been processed in unprecedented detail
- | Pinpoint any document in the system at any time

POWERFUL DOCUMENT PROCESSING PLATFORM

Brainware Distiller is a single solution that can process all types of documents in any language. There is no need to purchase another product or module to process your orders, remittances, invoices, bills of lading, EOBs, proof-of-delivery statements or any other transactional documents.

PROCESS

- | Input mail from any source including scan, email, fax and in any format including TIF, PDF, DOC and XLS and many more.
- | Classify documents based on their content to reduce manual sorting at scan time.
- | Extract field and line item data at 80-90% accuracy without templates, keywords or scripted rules.

TRANSACTION

- | Reconcile extracted data with trusted information sources to enable straight-through processing
- | Integrate indexing information and extracted data into existing enterprise application architecture and without disrupting business processes.

DISCOVER

- | Gain new insight into documents using Brainware's full text, fault tolerant search platform.
