

BRAINWARE DISTILLER™

for ORDERS

The speed with which you convert your customer orders into revenue is the lifeblood of your organization. The faster you turn an accurate order into a shipped good or completed service, the healthier your accounts receivable, the better your bottom line, and the happier your customers are.

However, order processing remains largely manual, error-prone and time-consuming. What's missing in most automation solutions is the ability to intelligently recognize, classify, and extract vital order data from a multiplicity of ever-changing documents and turn that data into an accurate shipment and invoice.

REDUCE REVENUE CYCLE TIMES

Brainware Distiller for Orders reduces your revenue cycle time by automating the task of manual data entry of sales orders, thus speeding up your ability to invoice and recognize revenue. The speed and efficiency of processing orders are dramatically improved, and human errors significantly decreased as order data is now validated against other information to ensure accuracy without slowing down the process.

Distiller requires no changes to your established business practices. It automatically sorts incoming documents, extracts all required data from the order, verifies the data against your catalog, ERP, or CRM system and sends order data to your order processing system for final review.

ACCURACY = LOYAL CUSTOMERS

How much does it cost you when orders are not correctly fulfilled? How many times will a customer excuse a shipment sent to the wrong address before they find another supplier? How much money do you have to spend to replace that customer? Customer satisfaction and loyalty increase remarkably when Distiller for Orders is used to provide faster, more accurate servicing of orders.

INCREASE SHARE OF WALLET

By reducing the need for manual data entry, you free up customer service resources to proactively up-sell and cross-sell your customers for even more revenue opportunities.

PROVEN

Some of the largest brands in the world rely on Brainware to automate their transactional data processing: Abbott, Airbus, Alcon, Amgen, Anadarko, Baylor Health Care, BB&T, British American Tobacco, Continental Airlines, CORT, Halliburton, Her Majesty's Prison Service, HMSHost, JohnsonDiversey, Kaiser Permanente, Kimberly-Clark, KPMG, Mayo Clinic, NHS Shared Business Services, Philip Morris International, Southern Company, and Sun Chemical to name a few.

Brainware Distiller™ was built from the ground up to help you quickly and accurately move transactional data from unstructured documents into your business information systems – with as little human intervention as possible.

|||||
RAPID TIME TO VALUE

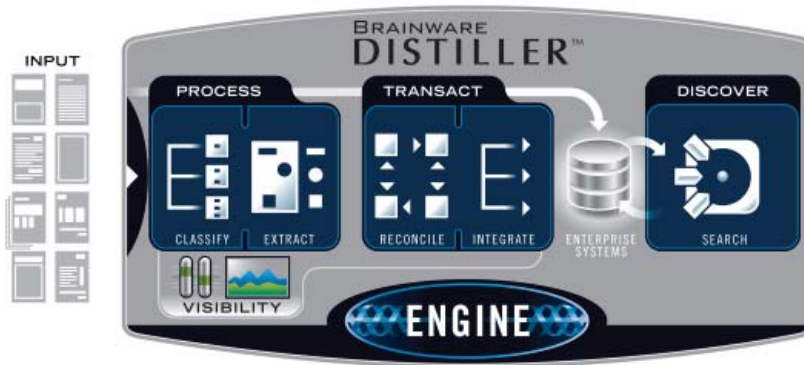

Distiller's template-free, human-like learning approach to data capture allows us to get the system up and running in your environment, in as little as 48 hours! Start realizing ROI with page one on day one!

|||||
UNIQUE, FLEXIBLE PRICING OPTIONS

In addition to the standard perpetual software license model, Brainware offers a "per-page" pricing model. This licensing model provides the lowest upfront cash investment and many organizations treat this type of license as an operational expense instead of a capital expenditure. "Per-page" licenses mean that you only pay for the documents that are processed. This licensing model can also be transferred to perpetual licenses in the future.

|||||
POWERFUL DOCUMENT PROCESSING PLATFORM

Brainware Distiller is a single solution that can process all types of documents in any language. There is no need to purchase another product or module to process your orders, remittances, invoices, bills of lading, EOBs, proof-of-delivery statements or any other transactional documents.

|||||
PROCESS

- | Input documents from any source including scan, email, fax and in any format including TIF, PDF, DOC and XLS and many more.
- | Classify documents based on their content to reduce manual sorting at scan.
- | Extract field and line item data at 80-90% accuracy without templates, keywords or scripted rules.

|||||
TRANSACTION

- | Reconcile extracted information against known sources to ensure accuracy and validity independent of misspellings and OCR errors.
- | Integrate indexing information and extracted data into existing enterprise application architecture and without disrupting business processes.

|||||
DISCOVER

- | Gain new insight into documents using Brainware's full text, fault tolerant search platform.
